building

focus:

Finishing first chassis

summary:

We finished up the chassis to hand off to coding by tightening all the screws. We also 3D printed pieces to go inside of the mechanism wheels since we lost the ones that came with the kit. Made sure to print out of nylon since it is the strongest!

challenges:

The middle parts of wheel printed out upside down at first so they were all melted-plastic looking.

next steps:

Hand it over to coding for wiring and testing
