

# October 20, 2022

## FOCUS

**building (Group 1):** Extra session: finishing rudimentary lift

## SUMMARY

**building (Group 1):** we attached the hex shaft thing to the motor and wound the wire around that (it works, yay!) and also added some extra support T slots to the arm system.

## CHALLENGES

**building (Group 1):** Not many issues, everything was fairly laid out before, just tying up loose ends (however, screwing things in can get tedious)

## NEXT STEPS

**building (Group 1):** next steps are adding the beam to the back of the arm to further stabilize, and figuring out what to do with the battery/control hub
