FOCUS

building (Group 1): Finishing touches on first robot

SUMMARY

building (Group 1): Reprinted a new version of the servo mount/claw and attached it to the lift. Also attached the mount for hubs to the back of the robot.

CHALLENGES

building (Group 1): The screws holes were not aligned perfectly to the wood, so we had to drill more. We also had to cut the wood in the scene shop because of it's width.

NEXT STEPS

building (Group 1): Add something silicon-like to the claws and send the robot off to coding for wiring and testing code
